

KHALED EBRAHEEM AHMED FETOOH

JUNIOR SOC ANALYST | IT & CYBERSECURITY

Egypt | khaledfetoh266@gmail.com | +201005059033

[LinkedIn](#)

PROFILE

junior Cybersecurity Analyst and SOC Analyst Trainee with hands-on experience in security monitoring, threat detection, incident response, network security, and log analysis. Strong networking foundation with practical knowledge of TCP/IP, VLANs, routing, firewalls, IDS/IPS, SIEM, and Windows/Linux security. Experienced in building cybersecurity projects involving real-time network traffic monitoring, deep packet inspection, and risk-based threat detection

EDUCATION

Bachelor of Artificial Intelligence at Delta University for Science and Technology, September 2023 - Present
Mansoura, Egypt
Grade: Very Good

EXPERIENCE

CIB Egypt — Summer Intern, The Green Leap Program at [Commercial International Bank \(CIB\)](#), Cairo, Egypt September 2025 - September 2025

Completed the CIB Summer Internship Program – The Green Leap, gaining exposure to Cybersecurity, Banking Systems, AI, Data Science, Data Engineering, Data Analysis, Sustainability, and Ethical AI.

INTERNSHIPS

Cyber Security Incident Response Analyst Trainee at [Digital Egypt Pioneers Initiative – MCIT](#), July 2026 - Present
Egypt

selected for DEPI Round 5 – Infrastructure & Security – Cyber Security Incident Response Analyst track. Developing hands-on skills in SOC Operations, SIEM, Incident Response, and Digital Forensics. Training in Windows and Linux Security, Network Security, Threat Detection, Security Monitoring, and Security Event Analysis. Applying these skills through hands-on labs and a cybersecurity capstone project

HCIA-Security Trainee at [National Telecommunication Institute \(NTI\) – Huawei ICT Academy](#), Mansoura, Egypt July 2026 - August 2026

Completed the HCIA-Security V4.0 Course through Huawei ICT Academy at the National Telecommunication Institute (NTI), covering network security fundamentals, cryptography, hashing, authentication, common cyber attacks, malware, firewalls, IDS/IPS, VPNs, and security technologies. Gained hands-on experience with Linux network interface configuration and troubleshooting using the ens3 interface.

Fortinet Cybersecurity Trainee at [National Telecommunication Institute \(NTI\)](#), October 2025 - December 2025
Egypt

Completed the Digital Egypt Youth Program – Fortinet Cybersecurity at the National Telecommunication Institute (NTI), with 90 hours of technical training and 30 hours of soft skills training, achieving a final score of 98%. Developed practical knowledge of network security, firewall technologies, security policy management, cybersecurity fundamentals, and Security Operations.

Network Engineer Trainee at Portegy IT Solutions, Port Said, Egypt October 2025 - December 2025

Completed a CCNA 200-301 Corporate Training Program with hands-on experience configuring and troubleshooting physical Cisco routers and switches in enterprise networking environments. Configured IPv4, subnetting, static routing, OSPF, VLANs, trunking, inter-VLAN routing, ACLs, STP, PortFast, BPDU Guard, Root Guard, DHCP, and EtherChannel using LACP/PAGP. Applied Cisco IOS show and debug commands for network troubleshooting and connectivity analysis. Designed network topology diagrams and documentation for a Small Business Infrastructure project, strengthening practical skills in network security, routing, switching, network segmentation, and troubleshooting.

SKILLS

Networking: TCP/IP, IPv4, Subnetting, VLANs, Trunking, Inter-VLAN Routing, OSPF, Static Routing, ACLs, STP, DHCP, EtherChannel, Cisco IOS, Network Troubleshooting

SOC & Cybersecurity: SOC Operations, Security Monitoring, Threat Detection, Incident Response, Network Security, Cybersecurity Fundamentals, Security Events and Log Analysis

Network Security: Firewalls, IDS/IPS, VPN, Cryptography, Encryption, Hashing, Authentication, Security Policies, Common Cyber Attacks, Malware Fundamentals

Operating Systems: Linux, Windows, Windows Server, Basic System Administration, Security Fundamentals

Security Tools: Wireshark, Nmap, SIEM, Cisco Packet Tracer, GNS3

PROJECTS

CyberShield Analyzer

September 2025 - January 2026

Developed a university cybersecurity project combining URL and pattern analysis with password security assessment. The system analyzes URLs for suspicious patterns and evaluates password strength using common security and complexity requirements.

- Achieved A+ grade for the university project. Developed URL scanning and pattern-based analysis functionality. Implemented password strength and security checks. Applied cybersecurity concepts including threat detection, pattern analysis, and password security.

Security Operations Center System for Network Management and Protection

February 2026 - June 2026

Developed a university cybersecurity project that integrates host security assessment and real-time network traffic monitoring into a centralized Flask-based security dashboard. The platform uses a local security agent to enumerate system assets, identify open ports, assess vulnerabilities, perform deep packet inspection, and classify network traffic based on risk levels.

- Achieved A+ grade for the university project. Developed a local security agent for host assessment, including asset enumeration, open-port detection, vulnerability assessment, and security configuration checks. Implemented real-time network traffic monitoring with deep packet inspection and rule-based risk classification. Detected and flagged risky protocols such as unencrypted FTP and Telnet and suspicious external connections. Identified host security gaps including disabled firewalls and exposed potentially dangerous services. Developed a Flask-based centralized dashboard for security monitoring, visualization, and historical analysis. Designed the architecture to support future integration of Machine Learning for advanced threat detection.
